FRASER UPDATES

- To prevent loss of 3RD & 6TH gear, the latest design snap ring is installed in the case. The snap ring is 27% greater in thickness which increases retaining force ensuring the snap ring remains engaged.
- To prevent leaks between the underdrive/overdrive and reverse clutch, solid PTFE stator support seals are used. PTFE seals are superior to the OE steel seals in separating these hydraulic circuits.
- 100% replacement of all high wear bushings
- 100% low drum replaced with the updated OE design
- Updated valve body kits are used to assist with common shifting concerns

100% Dyno Tested - insures trouble free installation
